Subject: PCB Sampling at Malibu High School

Ms. Lyon,

On December 20, 2013, EPA accepted the District's work plan which included sampling to evaluate conditions at the school after implementation of BMPs. The data submitted to us on January 3, 2014 was not part of the work plan and was collected prior to implementing BMPs. We look forward to reviewing the results of sampling conducted under the work plan.

We have, however, reviewed the air concentration measurements submitted to us on January 3, 2014. These results, as well as the air sampling from November 2013, are all at reported PCB concentration below our acceptable level for Schools of 0.2ug/m3 for air and are within our acceptable risk range for residential exposures, including the maximum concentration of PCBs in air.

We remain available to discuss these results and answer questions. Thank you.
